

Section 1: Password & Authentication Standards

All corporate accounts require passwords with a minimum length of 14 characters, combining uppercase letters, lowercase letters, numbers, and special symbols. Passwords must not contain user names or dictionary words. Multi-Factor Authentication (MFA) is strictly mandatory for all internal systems, VPN access, and cloud email.

Section 2: Device Encryption & Clean Desk Policy

All company laptops, workstations, and mobile devices accessing corporate data must employ full-disk encryption using 256-bit AES (BitLocker for Windows, FileVault for macOS). Under the Clean Desk Policy, sensitive documents and portable storage media must be locked in drawers whenever workstations are unattended.

Section 3: Security Incident Reporting

Any suspected security breach, unauthorized access, lost device, or phishing attempt must be reported immediately, and no later than one (1) hour following discovery, to the Security Operations Center via security@company.com.
